

VIII. OPENING DAY HEALTH SCREENINGS AND ASSESSMENTS

We want our campers to be both happy and healthy during their time at Hollymont.

The camp nurses will perform health screenings on Opening Day to check for illness, injury, and exposure to communicable diseases.

We ask that your camper be free of signs/symptoms of illness or injury and free of signs/symptoms of head lice. We reserve the right to ask that a child postpone or cancel her stay at Hollymont if her being at camp poses a risk to other campers and to staff.

Please contact our office if your camper/CIT has had difficulties within 72 hours prior to her arrival at Hollymont.

For the 2022 summer, COVID testing and health monitoring prior to arrival at camp will be required. Please review the separate Health Guidelines published on the website, on the Bunk1 dashboard (newsletter) and at linktr.ee/camphollymont.

Download, complete, and bring the Health Monitoring Form to camp.

Please notify us in advance of opening day if your camper has a specific health care issue requiring extensive daily or weekly treatment (ex. diabetes). We may elect to make arrangements to complete the health screening away from the press of opening day and with sufficient time to cover all aspects of care.

Head Lice Policy

If your camper has had head lice recently, we ask that she have been treated twice (7 days apart) and be nit free.

All campers are checked for head lice by our camp nurses during the Opening Day health screening. If nits or head lice are found, your camper must be professionally treated before completing the check-in process, moving into her cluster, and participating in activities.

Closest location in North Carolina: Asheville Lice (ashevillelice.com) provides professional lice screening and treatments. You are responsible for contacting them, securing treatment, and for the costs incurred. They are located at 116 Elkwood Avenue, Asheville, NC 28804. Call ahead for an appointment. (828-777-6540)
